CAREER OBJECTIVE

A highly motivated Full Stack Software Engineer with hands-on experience building production-grade backend systems using Java 21 and Spring Boot. Proficient in designing scalable RESTful APIs, implementing distributed caching with Redis, event-driven architectures with Apache Kafka, and secure JWT-based authentication systems. Possesses practical knowledge of AWS cloud services and a strong foundation in system design, data structures, and software engineering principles.

ACADEMIC DETAILS

- **Pursuing B.Tech CSE (2023–27)** from Amity University Madhya Pradesh with **CGPA 8.83**
- Senior School Certificate Examination (MPBSE) with Mathematics (2022–23) with **86.4%**
- Secondary School Certificate Examination (MPBSE) in 2020–21 with **83%**

CERTIFICATION COURSE

- **AWS Academy Graduate — Cloud Foundations Training Badge** | Amazon Web Services | April 2026
| 20 Hours | Credly Verified Badge: <https://www.credly.com/go/jH1gaVab>
- **JavaScript Algorithms and Data Structures Developer Certification** | freeCodeCamp | June 2025 – Present

EXPERIENCE

FULL STACK WEB DEVELOPMENT INTERN — CODTECH IT SOLUTIONS PVT. LTD. [August 2025 – September 2025]

- Completed an intensive 6-week Full Stack Web Development internship, delivering end-to-end development from UI design to backend API integration and database management on real-world client-facing projects.
- Designed and developed a fully responsive, multi-section professional portfolio website using HTML5, CSS3, and JavaScript — incorporating smooth scroll animations, mobile-first responsive layouts, interactive project showcases, and an integrated contact form with client-side validation; deployed the static site on AWS S3.
- Collaborated within an agile development workflow, participating in code reviews and iterative delivery cycles, which significantly strengthened skills in writing clean, maintainable, and well-documented code under professional deadlines.

PROJECTS

1. Dishari — Intelligent URL Shortener & Analytics Platform

Stack: Java 21 | Spring Boot | Spring Security | JWT | MySQL | Spring Data JPA | Redis (Redisson + Lettuce) | Apache Kafka | ZXing QR | MaxMind GeoIP2 | YAUAA | Jsoup | Playwright | Spring Mail | Thymeleaf | Lombok

- Architected a Bitly-grade URL shortening platform supporting Base62-encoded short links, custom alias creation, link expiry with auto-invalidation, and one-click QR code generation (via ZXing) — designed to handle high-throughput redirect traffic with sub-millisecond response times.
- Integrated Redis (Redisson + Lettuce with Commons Pool2) as a distributed caching layer for hot URL lookups — serving frequently accessed redirects directly from cache, reducing MySQL read load, and achieving near-zero latency on repeat requests at scale.
- Implemented Apache Kafka as an asynchronous event streaming backbone for click analytics — each redirect produces a Kafka event (timestamp, short code, IP, device, referrer, geo-location) consumed by a dedicated analytics consumer service, decoupling the hot redirect path from analytics writes and preventing I/O bottlenecks under peak load.
- Engineered a real-time analytics pipeline using MaxMind GeoIP2 for geographic attribution and YAUAA (Yet Another UserAgent Analyzer) for precise device and browser classification — powering a rich analytics

dashboard with time-series click trends, country heatmaps, OS/browser breakdowns, and referrer source tracking.

- Enforced multi-layered security with Spring Security + JWT authentication, Jakarta Bean Validation on all request DTOs, and Spring Mail-powered transactional email notifications; structured the codebase with clean layered architecture (Controller → Service → Repository) and DTO-based decoupling following SOLID principles.

2. Authentication System — Full Stack Enterprise-Grade Auth Platform

Backend: Java | Spring Boot | Spring Security | JWT | BCrypt | Bucket4j | Thymeleaf | MySQL

Frontend: TypeScript | React.js | Tailwind CSS

- Architected a complete full-stack authentication platform covering the entire auth lifecycle: user registration, email verification, JWT-based login, protected route navigation, forgot-password flow, and secure password reset.
- Built a production-quality React + TypeScript frontend featuring full form validation, real-time error feedback, and seamless JWT token management using interceptors for automatic Authorization header injection on every API call.
- Implemented protected routing with React Router guards — unauthenticated users are redirected to login; verified JWT expiry client-side and handled silent token refresh, replicating session management patterns used in enterprise SPA applications.
- Engineered advanced backend security: SHA-256 token hashing for reset tokens, email enumeration prevention (silent 200 on unknown emails), per-email rate limiting via Bucket4j, geo-IP anomaly detection with automated alert emails, and TransactionSynchronization-based post-commit email dispatch to eliminate ghost notifications on DB rollback.
- Enforced strict input validation on all DTOs using Jakarta Bean Validation (@NotBlank, @Pattern, @Size with BCrypt-safe max-length cap) and secured password storage with BCrypt strength-12 encoding — fully aligned with OWASP authentication security standards.

SKILLS AND ACHIEVEMENTS

- **Programming Languages:** Java, JavaScript, TypeScript, C++, C
- **Frontend:** React.js, HTML5, CSS3, Tailwind CSS, Chart.js, GSAP
- **Backend & Frameworks:** Spring Boot, Spring Security, Spring Data JPA, JWT, Bucket4j, REST API Design, Thymeleaf, Lombok
- **Databases & Caching:** MySQL, Redis (Distributed Caching, Session Management)
- **Messaging & Event Streaming:** Apache Kafka (Producer, Consumer, Event-Driven Architecture)
- **Cloud — AWS:** EC2, S3 (Static Hosting, Pre-signed URLs, Versioning), IAM (Roles, Policies, Least Privilege), Lambda (Serverless Functions), RDS (MySQL, Automated Backups), DynamoDB (NoSQL, Streams, TTL), VPC, CloudWatch (Monitoring & Alarms), AWS Billing & Cost Management, CodePipeline + CodeDeploy (CI/CD)
- **Tools & Libraries:** Git, GitHub, Postman, MaxMind GeoIP2, YAUAA, ZXing, Jsoup, Playwright, Apache Commons
- **Design Principles:** Low-Level Design (LLD), High-Level Design (HLD), SOLID Principles, OOPs, DBMS, OS, Computer Networks
- **Language:** English (Both), Hindi (Both)

Awards & Honor: First Rank — GeeksforGeeks Coding Leaderboard, Amity University (2025) — ranked #1 out of 800+ students.
